Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior art as cited by applicant in Fig 1 of drawings in view of Minneste Jr , Hoadley and Duff Jr .

3. Prior art cited by applicant in Fig 1 of drawings discloses three wire reversing system comprising common lead connected to second terminal of motor and alternating current input voltage source connected to common lead and selectively connected to one of first witch lead and second switch lead see Fig 1 prior art . Fig 1 lacks disclosing capacitor element in parallel with reversible dc motor, first and second diode for cw and ccw rotation of motor , and capacitor element includes two polarized capacitors connected to one another in series at a common negative terminal. Minneste Jr disclose capacitor element in parallel with reversible dc motor see fig 1 M and c6 and abstract. First diode and second diode for cw rotation of motor and ccw rotation of motor are discloses in Hoadley fig 1a #1 and col 3 liens 50-60. Duff Jr discloses capacitor element includes two polarized capacitors connected in series at common negative terminal, see fig 6A box #610 . It would have been obvious to one of ordinary skill in the art to combine the Prior art fig 1 three wire reversing system with Minneste Jr's capacitor element and reversible dc motor , Hoadley 's first and second diode , and two polarized

capacitors of Duff Jr for filtering, damping motor and increase life of capacitors for improved control .
